*NOTE: This is a 'working draft' sequence. It currently
* consists of I contigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submittor.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.
1 117146: contig of 117146 bp in length.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The nucleotide sequence of this BAC clone was generated by combining Syngenta and Cold Spring Harbor Laboratory Genome Center sequencing data.

Clone OSJNBb0011G21 overlaps clone OSJNBb0085H08 (AC118340) from base 67378 (complemented) or OSJNBb0085H08 is from base 52004 to base
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Submitted (04-SEP-2002) Lita Annenberg Hazen Genome Center, Cold Spring Harbor Laboratories, 1, Bungtown Road, Cold Spring Harbor, NY 11724, USA

                                      NOTE: This is a 'working draft' sequence. It currently consists of 16 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.
                                                                                                                                                                                                                                                                                                                                                         Sequencing vector: plasmid; n/a; 100% of reads Chemietry: Dye-terminator Big Dye; 100% of reads Assembly program: Phrap; version 0.990319

Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequence and whole genome shotgun sequences will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Submitted (19-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   NOTE: Estimated insert size may differ from sequence length
(see http://www.hgsc.bcm.tmc.edu/docs/Genbank draft_data.h
NOTE: This is a "working draft' sequence. It currently
consists of 10 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        as soon as it is available and the accession number will be preserved.

It currently consists of 7 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        in the feature table below represents a scaffold in the Atlas

NOTE: This is a 'working draft' sequence. It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    be preserved

Specifically, it refers to members of the $27/HtrA serine protease family, such that it plays a role in cellular physiology and apoptosis. The present invention provides agonists, antagonists, antibodies and recombinant expression vectors useful in methods of treatment, or detection and diagnosis of diseases associated with the aberrant expression or activity of the $2 serine protease, PRSS11-L. Accordingly, compositions described herein can be used via gene therapy routes to treat osteoarthritis, stress and apoptotic disorders. As such, they exhibit osteopathic, antiarrhritic and tranguilliser activities. This polynucleotide sequence is the human PRSS11
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated S2 serine protease nucleic acids and polypeptides, useful for diagnosing and/or treating diseases with aberrant expression or activity the S2 serine protease, such as osteoarthritis, stress and

CC sequences (appearing as ABS76747-ABS77516) a of a xenopus embryonic gene contriguous nucleotides of one of those sequences. Also included are contacting differential expression of embryonic genes, comprising: (a) contacting a nucleot acid array comprising genes expressed in embryonic but not mature cells with nucleic acids from sample and control cells; and (b) detecting differential hybridisation of nucleic acids from the sample cells relative to the control cells; and detecting defects in cells and control cells; and cevelopment, comprising: (a) contacting nucleic acids from the condergoing development with a nucleic acid array of gene products known to play a fundamental role in the development process; and (b) detecting a difference in expression of a fundamental gene in the sample cells relative to a standard. The invention is useful to identify genes involved in embryonic development and related processes such as cell differentiation. This would be useful for disgnosing developmental cells. The disorders and for identifying different types of embryonic cells. The present sequences is one of the 770 Xenopus embryonic cDNA sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Nucleic acid array containing Xenopus embryonic nucleic acids is useful to identify genes involved in embryonic development, to identify different types of embryonic cells, and to diagnose developmental

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          encoding a polypeptide whose expression is inhibited by the antisense conucleic acid; (2) a host cell containing the vector; (3) an isolated copolypeptide or its fragment whose expression is inhibited by the collection or the fragment whose expression is inhibited by the compounding companies; (5) producing the polypeptide; (6) inhibiting cellular compounding companies; (7) identifying a gene in an operon required for compounding the polypeptide; (8) product or that has an activity against a biological pathway compounded that influences the activity of compounding red for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies cor a gene on which the test compound that inhibits proliferation of an compounding acts; (9) manufacturing an antibiotic; (10) profiling a compounding acts; (9) manufacturing an antibiotic; (10) profiling a compounding activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent compounding the cardinal for collection of confidention of an organism. The antisense nucleic acids are useful for clanifying proteins or screening for homologous mucleic acids required confidence collections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   K. pneumoniae or P. aeruginosa. The present sequence is one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/muh/muhitemad ---
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Wang

CC encoding a polypeptide whose expression is inhibited by the antisense concleic acid; (2) a host cell containing the vector; (3) an isolated containing the polypeptide by the containing the polypeptide; (5) producing the polypeptide; (6) inhibited by the containing the polypeptide; (6) inhibiting cellular containing the polypeptide; (6) inhibiting cellular proliferation; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway containing a gene required for cellular proliferation or the biological pathway in which a proliferation, or that inhibits cellular proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene contains acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene conduct is overexpressed or underexpressed; (12) determining the extent convolute activity; (13) identifying the target of a compound that inhibits the convolution of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required confidence and iscovery programs, or for screening processing nucleic acids are useful.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       21-MAR-2001; 2001US-00813242.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a DNA expressed by filamentous-fungi. The DNA is useful for detecting filamentous-fungi and is useful for measuring happergillus fermentation conditions. A method of detecting the DNA is useful for measuring the actual growth state of Aspergillus from the actual growth state of Aspergillus. The quantitatively and the expression level of desired gene specifically. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ds; filamentous-fungus; Aspergillus fermentation; solid culture
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Aspergillus solid-culture DNA #394.

The invention relates to recombinant carcinoma associated (CA) nucleic cc acid sequences from mouse and human (ADA01482-ADA03094), and to recombinant carcinoma associated proteins (CAP) encoded by them. The cc invention also encompasses expression vectors and host cells comprising a cinvention also encompasses expression vectors and host cells comprising a cinvention also encompasses expression vectors and host cells comprising a cinvention are related to the protein, and a biochip comprising CA nucleic acid or comprising the tells comprising CC and tell thereof. The sequences of the invention were identified using creating the carcy transduced host oncogenes or carcinoma. Many of these do not carry transduced host oncogenes or cc at random. Many of these do not carry transduced host oncogenes or cc at random. Many of the effects of proviral integration into host cdirect consequence of the effects of proviral integration into host correct consequence. The CA nucleic acid sequences can be used to diagnose creations (especially breast cancer, prostate cancer, lymphoma or carcinoma (especially breast cancer, prostate cancer, lymphoma or composed com
                                                                                                                                                                                                                                                                                                                                                                                                                              Percent Similarity:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a novel recombinant nucleic acid comprising a nucleotide sequence selected from any of the 660 sequences fully defined in the specification. A polynucleotide of the invention has cytostatic activity, and may have a use in gene therapy, or in a vaccine. The recombinant nucleic acids and polypeptides are useful for treating carcinomas, e.g. lymphomas, cancers, neoplasm, adenocarcinoma, and sarcomas. The present sequence represents a human gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Homo

Manipulation of the enhancer can be used either to slow or prevent tumor growth or to promote differentiation of specific cell types, e.g. epidermal cells to promote hair formation. The complete mouse syndecan gene and its encoded protein are given in AAQ67902 and AAR55276. (Updated on 25-MAR-2003 to correct PN field.) (Updated on 25-MAR-2003 to correct PI field.)

                                       This is the nucleotide sequence of the mouse syndecan gene, used in the method of the invention involving the novel syndecan enhancer element, useful in expression vectors. The vector can be used to produce a host cell for expressing a structural gene. The expression vector can be used to differentially express a gene at a wound site, and promote wound

01-DEC-1993;
07-MAR-1994;
        vectors which contain either the enhancing or suppressing DNA molecules. The products may be used to alter the differentiated state of a host cell by altering its expression of syndecan, e.g. to induce and regulate syndecan expression, especially in cells which exhibit a malignant phenotype, regardless of the origin of transformation. The products can be used to produce therapeutics for suppressing tumour growth. They may enhance the syndecan expression in a host cell, by enhancing its gene transcription, especially in malignant or normal cells, and therefore
                                                                                                                enhances the expression of a gene operably linked to the promoter of the mouse syndecan gene in 3T3 cells following treatment with TGP- beta and bFGF when the fragment is operably linked to the promoter. A purified DNA molecule comprising a portion of the nucleotide residues 3538-3888 of the mouse syndecan genomic sequence (AAVI5946) suppresses expression of a gene operably linked to the promoter of the mouse syndecan gene in S115 cells treated with testosterone. Host cells can be transfected with
                                                                                                                                                                                                                                                                                                    New mouse syndecan gene sequences -
                                                                                                                                                                                                          approximately 9 kb upstream from the transcription initiation site. A base pair fragment (AAV15948) of this purified enhancing DNA molecule
                                                                                                                                                                                                                                    This is the mouse syndecan gene

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            US-10-617-443B-2_COPY_1_9 (1-9) x ACA60751 (1-2196)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  RESULT 14
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a method of promoting cutaneous wound healing which comprises directly introducing to a cutaneous wound site a recombinant expression vector comprising the syndecan enhancer element, represents the seponse Element (FiRE), operably linked to a FIRE-activated promoter which is operably linked to a structural gene encoding a growth factor that promotes the cutaneous wound healing. The method is a growthing regeneration of tissue e.g. promotion of hair growth. The invention enhances syndecan expression via administration of growth invention. The enhancer element regulates the expression of syndecan. The factors. The enhancer element regulates the expression of syndecan. The present sequence represents the mouse syndecan enhancer element, FGF-inducible Response Element (FiRE)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Promotion of cutaneous wound healing comprises introducing to wound site recombinant expression vector comprising syndecan enhancer element linked to promoter which is linked to structural gene encoding growth factor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Jalkanen M,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Example 8; Fig 4; 84pp; English.

The sequences are useful for: (i) for screening drug candidates; (ii) for screening of bloactive agent capable of binding to Carcinoma Associated Protein (CAP); (iii) for screening of a bloactive agent capable of modulating the activity of CAP; (iv) for evaluating the effect of a candidate carcinoma drug; (v) for diagnosing carcinoma; (vi) for inhibiting the activity of CAP; (vi) for treating carcinoma; (viii) for neutralizing the effect of CAP; (vi) as a blochip; (v) for diagnosing carcinoma are propensity to carcinoma; and (xi) for CAP; (viii) for neutralizing the effect of CAP; (vii) as a blochip; (vi) for diagnosing carcinoma carcinoma copy number. In addition, the determining Carcinoma Associated (CA) gene copy number. In addition, the determining Carcinoma hasociated (CA) gene copy number is one such CA coding sequence. Note: This patent is an equivalent to basic patent useful as markers of carcinoma including lymphoma. The present sequence is one such CA coding sequence. Note: This patent is an equivalent to basic patent useful as markers.

useful Nucleic cacids encoding human immune/hematopoietic for preventing, diagnosing and/or treating antigen polypeptides, cancers and metastasis.

Disclosure; OI DES ĕ 22051; 3071pp + Sequence Listing; English.

CC AAKS4951 to AAK64702 encode the human immune/haematopoietic antigen (I) CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic CC activity, and can be used in gene therapy and vaccine production. (I) CC proteins and polynucleotides may be used in the prevention, diagnosis and CC treatment of diseases associated with inappropriate (I) expression. For CC example, they may be used to treat disorders associated with decreased CC expression by rectifying mutations or deletions in a patient's genome CC that affect the activity of (I) by expressing inactive proteins or to CC supplement the patients own production of (I). Additionally, (I) CC concers and treat immune/haematopoietic-related (I), by inserting the CC protein. (I) proteins and polynucleotides may be used to prevent, CC diagnose and treat immune/haematopoietic-related diseases, especially CC cancers and cancer metastases of haematopoietic antigen genomic CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169 CC represent sequences used in the exemplification of the present invention.

```

```
Pred. No.
 is the number of results predicted
by chance to have a
```

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
